WORK EXPERIENCE

Web Developer/Programmer

Aditya Systems - April 2016 to Present

HoseLifeTracking is an web application built for both customers and clients to manage every detail of the products they sell or buy with the help of QRCode, where it helps every user with the necessary particulars they need with the help of assembly number in getting reports in variety of formats.

Roles and Responsibilities:

- > QR Code Generation: Generating QR code for the Manufacturer products and Customer products by entering details such as Assembly Details, Component Details, Visual Inspection, Test Details and customer Details.
- > Scan QR Label: Both manufacturer and Customer can scan the QR label to get the details of the particular products. Once the QR label on the product is scanned using mobile devices, it will be redirected to public leaf where it shows the basic details of that particular product. Users have to login to know more details and to get the report of the particular products.
- > Report: Reports are generated for the products based on Manufacturer, Customer, Testing Product, PO & Part Number, Retirement and Master Report in both excel and PDF format.
- > User authentication: This section includes Super admin, admin, and Users for both Manufacturers and Customers.
